CHAPTER I

INTRODUCTION

The most important task of education today is that of introducing children to the people of the world. It is no longer a question of whether children should be prepared to live in a world community. They will either live in a world community or not live at all. The key to survival depends on education for world understanding.

**Purpose of the study.** It was the purpose of this study to investigate ways that would help children at the intermediate grade level acquire an understanding of the people in the countries of Norway, Congo, and China.

**Importance of the study.** The writer in teaching intermediate grades, has noted the need for new approaches to help children develop a sympathetic understanding of the people of the world community in which they live.

In a global world, a new vision is needed in the approach to geography and a broader vision in all the social sciences.
I. DEFINING THE PROBLEM

In the Des Moines, Iowa Public Schools, as in many throughout the country, the central theme for social studies at the intermediate grade level is a study of the people of the world, with principal emphasis being placed on one country in each geographical region as a unit of study. Norway, Congo, and China were chosen as preliminary units because of their geographic locations. However, it is believed by the writer that the information in Chapters II and III can be useful for the teacher-learner in all the countries of the world.

II. DEFINITION OF TERMS

Norway. Norway is one of the Scandinavian countries of Northern Europe. Norway is a long, narrow country which stretches the length of the Scandinavian Peninsula, between Sweden and the North Atlantic Ocean.

Congo. Congo is the short form for the Republic of the Congo (formerly Belgian Congo). For use on maps, Pearcy

---

1Harlan H. Barrows, Edith Putnam Parker, Clarence W. Sorensen. Our Big World (Chicago: Silver Burdett Company, 1959). (Textbook used in Des Moines, Iowa Public Schools)

has recommended that Congo be identified as the Republic of Congo. Congo, one of the new states of Africa, is located in south-central Africa.

China. China occupies the central portion of the continent of Asia. The mainland of China is under the control of the Chinese Communists. The Government of the Republic of China, the island province of Taiwan, is the legitimate government of China.

Approaches. Approaches, as used in this study refers to "teaching approaches", which will include materials, activities, and resources related to the study.

III. PROCEDURES

The investigator (1) read extensively from varied materials to become informed how understanding of the people of Norway, Congo, and China could be developed and to formulate objectives for resource material to be included. In keeping with these objectives, the investigator (2) made a source file of useful teaching materials for teachers and children, including a file for each of the three countries. The source file includes reading materials, visual aids,

resource people and places; and a list of free and inexpensive materials. The investigator, as a result of the review of literature, (3) presented a study outline which could be followed in teaching the basic concepts of each cultural region, and (4) a check list to determine whether objectives from the review of literature had been met.
CHAPTER II

REVIEW OF THE LITERATURE

Within this chapter the investigator will review pertinent literature of the field in order to establish objectives for teaching approaches that will meet the needs of children in their understanding of people of the world.

"Today's world is a changed world and a changing world. Today's world is a world made small by technical improvement in communication and transportation." The investigator recognizes as a basic objective of teaching approaches today, that these approaches must be different from that offered in the schools one-hundred, fifty, or even ten years ago, for the world today is a different world, posing different problems and requiring different skills and knowledges.

"Science and technology have revolutionized and continue to revolutionize almost every aspect of our lives." As a result of technology in America the output per manhour

---

has increased eighteen per cent on the average since 1850. During the same period the national income has increased almost twenty-three times, while the average work-week has shrunk to eight hours a day, five days a week. Increased family income has brought higher standards of living for both farm and city workers. Machines have increased the output, given more leisure, and provided a better standard of living for the average American.

Hanna also stated that machines have changed Americans from a simple agrarian to an industrial, urbanized society and have deprived children and youth of many of the opportunities they formerly had of performing household and farm chores and of learning through practical daily experience much of the knowledge and skills needed for living effectively in a simple culture. Life is much more complex today and the knowledge and skills needed must be greatly expanded and specialized. Therefore, children do not perform simple tasks through which they can develop responsibility, self-reliance, and self-confidence.

Children should also have a wholesome respect for all kinds of work and for workers in all kinds of occupations. People today are dependent upon others for food, clothing, recreation, the material and furnishings for their homes, the utilities used, their drinking water, roads, health and safety, and protection of life and property.
Jobs will be eliminated, or will be constantly modified by technological change. "Children today will come to grips with new 'explosions', learning, population, and communication. They will need to know more, have higher skills, deeper insights, and greater flexibility." The investigator has selected as a second objective for teaching approaches, that these approaches must help children develop good attitudes and work habits which are applicable to the tasks they encounter as children as well as those they will meet as adults.

The increasing interdependence of countries and peoples should be stressed to boys and girls. "Whether it is from the games he plays, and the music he sings, the foods he eats, or the devices and machines he uses, the elementary school child can learn some extent of his debt to other peoples."  

Hanna stated that because of exploitation of the natural resources, conservation has become a major need in America. Youth needs to understand that the world's population is rapidly outstripping its resources. Two-thirds of

these human beings live or starve on substandard diets. The promise that in future centuries the sea and atomic age may produce more food does not satisfy the hungry stomachs of the people of Asia and Africa.\(^1\) The median home in the world is a one-room hut. Disease is still prevalent. One-third of the world's population is illiterate. The investigator has selected as a third objective for teaching approaches that these approaches must apprise the children of the problems of conservation in American Society and hunger, disease, and illiteracy in less-developed societies.

Urbanization and machines have contributed greatly to the changed pattern of family life in America. In non-technological societies the family is still the producing and consuming unit. Today's children should be helped to discover these differences.

Sociologists and anthropologists have found social stratification existing in every community in America.

The class system in America operates against the individual who fails to measure up to the mores and standards of that class, but the caste system operates against a whole race or religion, and the individual is discriminated against because of physical characteristics about which he can do nothing . . . Much progress has been made within recent years

\(^1\)Hanna, \textit{op. cit.}, p. 26.
to improve intercultural and interracial relations. The investigator has selected as a fourth objective for teaching approaches that these approaches should instill in children a knowledge of their own country, pride in it, and respect for the best in the national environment, aspirations, and a wish to improve their native land. Then the children are able to build a feeling of concern for the welfare of those in other nations.

The world has become one, and all people have become neighbors, as a result of the product of science and technology, the conquest of time and distance. Natural barriers have been wiped out by the airplane. In a world grown so small, all persons are neighbors. People, communities, and nations have become dependent on each other for goods and services. Since the United States has greater wealth and resources and a more favorable position, the average American will have a larger role in shaping the future of mankind than will the typical citizen of any other country. For this reason, the writer has selected as a fifth objective for teaching approaches that these approaches should help children become conscious of their obligations as world citizens.

Democracy can best be learned by living democratically. Children can learn democratic principles by

---

learning to work together, by assuming responsibili-
ties for a share of the day's work, by respecting and
appreciating the rights of others, and by putting the
welfare of the group above their personal interests.  

The investigator has selected as a sixth objective for teach-
ing approaches, that these approaches help children under-
stand democratic principles.

Children should be helped in discovering that funda-
mentally people are the same the world over, and that there
are just a few basic biological differences. "Camels and
buffalo carts, loinclothes and black skins, may seem strange,
but if one looks at the essential characteristics, the chief
impression is not one of differences, but of likenesses."

Youth today should learn that countries are very much
like people and are affected by their size, location, history,
and beliefs. "Standards of right and wrong vary throughout
the world. In the United States it is wrong and may be pun-
ished by law to have more than one wife at a time. A Moslem
may have four wives." It would not be feasible or desirable
to attempt to make a study of all the cultures of the world.

Therefore, the investigator has selected the countries of
Norway, Congo, and China for an intensive study at the

---

1Hanna, op. cit., p. 13.
2Preston, op. cit., p. 197.
3Olivia, op. cit., p. 11.
intermediate grade level. The objectives selected for the resource unit aimed at children's understanding these three countries are the following: The resource unit

1. Must be different from those of other years, because of technological changes.
2. Should help children develop good attitudes and work habits.
3. Should apprise children of the problems of conservation in American society and hunger, disease, and illiteracy in less-developed countries.
4. Should instill in children a knowledge of their own country, pride in it, respect for the best in national environment, aspirations and traditions, and a wish to improve their native land.
5. Should help children become conscious of their obligations as world citizens.

6. Hanna, op. cit., p. 27.
CHAPTER III

SOURCE FILE

The wealth of instructional resources today for teaching approaches for approaches to world understanding has increased tremendously in the last decade. Materials in and of themselves, no matter how fine, no matter in what quantity, will not assure an understanding of the people of the world. The value of instructional materials lies in how, why, and when they are used. Because of the constant changes taking place in the world, the teacher today must select up-to-date instructional materials which will best meet the needs of children.

Purpose of the source file. It was the purpose of the writer to select resource materials for a source file for Norway, Congo, and China and evaluate these materials in the light of the objectives. Within this chapter will be listed those materials which pertain specifically to the three subject areas. Materials pertaining generally to all three areas will be included in the Appendix.

Procedure. The investigator selected those materials
which can be used effectively in teaching approaches for understanding people of the world.

Shapp suggested that lists of materials could be placed effectively in three categories: (1) reading materials; (2) audio-visual materials; and (3) people and places as resources.

CHAPTER IV

STUDY OUTLINE AND EVALUATION

CHECK LIST

Chapter IV will include a study outline, used by the investigator in teaching units on Congo, China, and Norway, and a check list, which are devised to determine whether objectives derived from review of literature have been accomplished.

Procedure. The study outline includes areas which the investigator explored in teaching units on the Congo, China, and Norway. The study outline has been divided into twelve general topics. Within each main division are suggestions for specific topics. No one child can be expected to become informed about all of the areas of the study outline. In the investigator's experience, children have developed several of the topics to a further extent than is listed. Children have been divided into interest groups, and each group has worked on a specific area of the problem to share with the other class members. The outline is as follows:
I. Location
   A. Locate the country on
      1. The globe
      2. Wall map
      3. In textbook or reference book

II. Topography
   A. Name and locate these natural regions.
      1. Mountains
      2. Plateaus and/or
      3. Plains
      4. Rivers and/or
      5. Lakes

III. Climate
   A. Likeness to ours
   B. Different from ours
   C. Reasons for likenesses or differences

IV. Plants and Animals
   A. Most important plants and animals
   B. Adaptations to this region

V. Industries
   A. Natural resources
   B. Kinds of factories
VI. People
   A. Population
   B. Dress
   C. Homes
   D. Foods they eat
   E. How they earn their living
   F. Recreation

VII. Cities
   A. Locate the capital
   B. Name several large cities and give reasons for their growth.

VIII. Transportation
   A. To other countries and parts of the world
   B. In the cities
   C. In the rural areas

IX. Communications
   A. Different types of communication
   B. Likeness to or different from ours.

X. Government
   A. Head of government
   B. How elected

XI. Culture
   A. Schools
   B. Religion
C. Music, art, literature
D. Customs

XII. Interdependence of the country with the rest of the world
A. Contributions to world
B. How it is dependent

**Purpose of the check-list.** The investigator has devised a check-list to be used at the intermediate grade level to determine whether objectives derived from review of literature have been achieved.

**Procedure.** The check-list is in the form of three charts and is comprised of (1) basic understandings; (2) work habits; and (3) attitudes. Each child will check his charts. If the teacher disagrees with the child in his appraisal of his growth, a conference will be arranged and the differences discussed.

The chart for basic understandings has been precisely devised in the light of the following objectives, stated in the review of literature. The resource unit:

1. Must be different from those of other years, because of technological changes.

---

1 Table III.
2. Should help children develop good attitudes and work habits.

3. Should apprise children of the problems of conservation in American society and hunger, disease and illiteracy in less-developed countries.

4. Should instill in children a knowledge of their own country; pride in it; respect for the best in national environment, aspirations and traditions; and a wish to improve their native land.

5. Should help children become conscious of their obligations as world citizens.

The charts for work habits and attitudes, which were suggested by Hanna, have been constructed to strengthen the second objective, (Resource unit should help children develop good attitudes and work habits) and the sixth objective, (Resource unit should help children understand democratic principles).

1Tables I and II.  
2Table III.  
3Table III.  
4Table III.  
5Table I.
Table I will be concerned with work habits, Table II with attitudes, Table III with understandings concerning changing conditions (first objective), conservation (third objective), one’s own country and pride in its accomplishments, (fourth objective), one’s obligation as a world citizen, (fifth objective) and democratic principles, (sixth objective). These charts, which are to be marked by both teacher and pupil can serve at the conclusion of the teaching unit as a check whether objectives have been met.

CHAPTER V

SUMMARY

It was the purpose of this study to investigate ways that would help children at the intermediate grade level acquire an understanding of the people in the countries of Norway, Congo, and China.

The investigator (1) read extensively from varied materials to become informed how understandings of the people of Norway, Congo and China could be developed and to formulate objectives for resource material to be included. In keeping with these objectives, the investigator (2) made a source file of useful teaching materials for teachers and children, including a file for each of the three countries. The source file includes reading materials, visual aids, resource people and places; and a list of free and inexpensive materials. The investigator, as a result of the review of literature, (3) presented a study outline which could be followed in teaching the basic concepts of each cultural region, and (4) devised a check list to determine whether objectives formed from review of literature had been met.

Within this problem of study the investigator reviewed pertinent literature of the field to establish objectives for teaching approaches that would meet the needs
of children in their understanding of the people of the world. The objectives selected for the resource unit were aimed at children's understanding these three countries. The resource unit:

1. Must be different from those of the past.
2. Should help children develop good attitudes and work habits.
3. Should help children develop an understanding of democratic principles and their obligations as world citizens.
4. Should help children understand problems of conservation in American society and hunger, disease, and illiteracy in less developed countries.
5. Should instill in children a knowledge of, and pride in their own country.

In keeping with these objectives, the resource unit was formulated, a study outline was constructed and followed in a teaching unit, using parts of the source file, and a check list was devised to determine whether objectives had been met.
